1. INTRODUCTION

1.1 Project Overview

The "Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits" project aims to analyze data related to consumer habits in the food delivery and dining sector. By utilizing advanced data visualization tools, this project examines key variables such as order frequency, preferred food categories, delivery time, customer demographics, and feedback patterns to derive actionable insights. The project provides an interactive platform that allows stakeholders to explore consumer behavior trends efficiently and identify critical factors influencing food ordering decisions.

1.2 Purpose

The primary purpose of this project is to transform raw consumer behavioral data into meaningful visual information to understand the evolving food industry landscape. This project helps food service providers, restaurant owners, and market analysts better understand consumer preferences, optimize menu offerings, improve delivery service efficiency, and identify the major factors influencing purchasing habits.

2. IDEATION PHASE

2.1 Problem Statement:

Customer Problem Statement:

The Food Ordering Behavior project is designed to understand the challenges faced by consumers, restaurant owners, and food delivery analysts when examining ordering trends. By identifying the difficulties users encounter while comparing cuisines, delivery times, pricing, and overall consumer preferences, the team aims to develop an effective data visualization solution that simplifies complex consumer habits and supports better decision making.

A well-defined customer problem statement helps the team understand user needs and expectations from different perspectives, enabling the identification of important factors affecting ordering habits and transforming raw data into meaningful visual insights. Using Tableau, the project presents interactive dashboards and stories that allow users to explore consumer trends, compare restaurant characteristics, and make informed decisions based on accurate and easy-to-understand visual analysis.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am a food consumer.	Find a restaurant that fits my budget and preferences.	I cannot easily compare prices, ratings, and delivery times.	Ordering data is scattered across apps and difficult to interpret.	Confused and unsure about making the right ordering decision.
PS-2	I am a food delivery analyst.	Analyse order frequency and market trends.	It is difficult to identify patterns and factors affecting ordering habits using raw data.	Large datasets are complex and require proper visualization and analysis.	Time-consuming and less confident in providing accurate insights.

2.2 Empathy Map Canvas:

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviors and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits

Empathy Map

2.3 Brainstorming:

Brainstorm & Idea Prioritization:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

This brainstorming session is conducted to generate, discuss, and prioritize ideas for the Food Ordering Behaviour and Consumer Trends analysis project. The team identifies the best approaches for analyzing consumer data, discovering market trends, and designing interactive Tableau dashboards that provide clear and meaningful insights.

1 Before you collaborate

Before starting the project, the team discussed the challenges in understanding consumer food ordering patterns and identifying the factors affecting ordering habits. The team members reviewed the dataset, defined project objectives, assigned responsibilities, and planned the workflow for analyzing and visualizing food ordering data using Tableau.

- Team gathering**
Form a cross-functional team with diverse skills and understand business goals.
- Set the goal**
Define key objectives: analyze ordering behavior, identify trends, and derive actionable insights.
- Learn about the data**
Explore the dataset, understand variables like customer demographics, order details, time, platforms, food categories, etc.
- Assign roles & plan workflow**
Define responsibilities, set milestones, and plan the analysis and dashboarding workflow in Tableau.
- Open within** 

2 Define your problem statement

How might we analyze and visualize food ordering data to help stakeholders understand consumer trends and make better service-related decisions?

Key rules of brainstorming

To ensure meaningful and inclusive ideas:

-  Stay on topic.
-  Encourage wild ideas.
-  Defer judgment.
-  Listen to others.
-  Go for volume.
-  1 speaker, no interrupt.

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Write down ideas that help analyze food ordering data, identify factors affecting consumer behavior, and create meaningful visualizations. **Discuss all ideas with the team** and select the most effective solution for the project.

1. Data Prep

- Collect food ordering dataset
- Handle missing values
- Clean duplicate records
- Standardize data formats

2. Analysis

- Analyze order frequency
- Compare cuisines
- Examine delivery times
- Analyze customer demographics

3. Visualization

- Identify consumption trends
- Compare restaurant ratings
- Analyze price distributions
- Visualize order volume

4. Execution

- Create bar charts, line charts, and heatmaps
- Build interactive dashboards
- Create a Tableau story
- Apply themes for better storytelling

3 Group Ideas

Group similar ideas together based on their purpose and importance. Organize the ideas into the following key areas to identify the best approach for developing the Food Ordering Trends dashboard.

Key focus areas

- Data Prep**
Ensure clean and reliable data
- Analysis**
Discover insights and patterns
- Visualization**
Create clear and meaningful visuals
- Execution**
Build interactive dashboards and stories

Step-3: Idea Prioritization

Prioritize

Evaluate each idea based on its importance and feasibility.
Select the ideas that provide the greatest value and are implemented effectively in the Food Ordering Trends project.

3.REQUIREMENT ANALYSIS

3.1 Customer Journey map:

PROJECT						SCENARIO			
Food Ordering Behaviour: Consumer Trends Analysis						Browsing, selecting, ordering food online, tracking delivery, receiving the order, rating the experience, and receiving personalized recommendations.			
	1 ENTICE	2 ENTER	3 ENGAGE	4 ENGAGE	5 ENGAGE	6 EXIT	7 EXIT	8 EXTEND	9 EXTEND
Steps	Discover Food Delivery Platform	Open App & Login	Browse Restaurants & Menu	Add Items to Cart	Payment	Track Delivery	Receive Food	Rate & Review	Personalized Recommendations
What does the person typically experience?	Things • Mobile App • Website • Social Media Ads	Things • Login Screen • OTP Verification	Things • Search Bar • Restaurant List • Filters • Menu	Things • Cart • Quantity Controls • Coupons	Things • UPI • Credit Card • Wallet • Cash on Delivery	Things • GPS Tracking • Notifications	Things • Food Package • Delivery Confirmation	Things • Rating Screen • Review Form	Things • Recommendation Engine • Push Notifications • Email
Interactions	Places • Home / Office / College	Places • Home / Workplace	Places • Mobile App	Places • Mobile App	Places • Mobile App	Places • On the Go	Places • Home / Office	Places • Mobile App	Places • App / Email
Goals & motivations	People • Friends / Family • Influencers	People • Customer Support (if needed)	People • Restaurant Listings	People • System Notifications	People • Payment Gateway	People • Delivery Partner	People • Delivery Partner	People • None / System	People • System
Positive moments	"Help me find a reliable food ordering platform with good offers."	"Help me access my account quickly."	"Help me find food that matches my taste and budget."	"Help me place my order with maximum savings."	"Help me pay securely and quickly."	"Help me know exactly when my food will arrive."	"Help me receive fresh food delivered on time."	"Help me share my experience and feedback."	"Help me discover meals I'll enjoy based on my preferences."
Negative moments	• Attractive discounts • Easy app installation • Good ratings	• Fast OTP verification • Easy sign-up process	• Easy search • High-rated restaurants • Food photos	• Coupon discounts • Combo offers • Easy customization	• Fast payment • Cashback offers • Multiple payment options	• Live tracking • Accurate ETA • Timely updates	• Hot food • Correct order • Good packaging	• Quick and easy rating process • Acknowledgment messages	• Relevant suggestions • Exclusive offers • Loyalty rewards
Areas of opportunity	• Too many competing apps • Confusing offers	• Login failures • OTP delays	• Too many options • Missing menu details	• Coupon not applicable • Hidden delivery charges	• Payment failure • Slow payment gateway	• Delivery delays • Poor communication	• Wrong order • Cold food • Damaged packaging	• Long feedback forms • No response after review	• Irrelevant suggestions • Too many notifications
Insights & Visual Analysis from Tableau Dashboard	Dashboard Link: https://public.tableau.com/views/FoodOrderingBehaviourConsumerTrendsDashboard/Dashboard1?showVizHome=no				Story Link: https://public.tableau.com/views/FoodOrderingBehaviourConsumerTrendsStory_17834337973630/Story1?showVizHome=no				

3.2 Solution Requirement

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Data Collection	Import food ordering dataset (CSV) into Tableau
		Verify dataset integrity and structure
FR-2	Data Preprocessing	Remove duplicate records
		Handle missing values and clean the dataset
FR-3	Data Visualization	Create charts and graphs for food ordering behaviour analysis
		Build interactive dashboards and Tableau Story
FR-4	Data Analysis	Analyze customer ordering patterns, cuisine preferences, delivery performance, and spending habits
		Generate consumer insights and trend analysis

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Dashboards should be simple, interactive, and easy to understand.
NFR-2	Performance	Visualizations should load quickly and respond efficiently.
NFR-3	Reliability	The analysis should produce consistent and accurate results.
NFR-4	Data Accuracy	Food ordering data should be processed correctly without loss of information.
NFR-5	Scalability	The dashboard should support larger food ordering datasets in the future.
NFR-6	Maintainability	The dashboard should be easy to update when new food ordering data becomes available.

3.3 Data Flow Diagram

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD – LEVEL 1

Food Ordering Behaviour Consumer Trends Dashboard

User Stories:

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Business Analyst	Data Upload	USN-1	As a business analyst, I can upload food ordering datasets for analysis.	Dataset is uploaded successfully and available for analysis.	High	Sprint-1
Business Analyst	Data Cleaning	USN-2	As a business analyst, I can clean and validate food ordering data.	Missing and invalid values are handled correctly.	High	Sprint-1
Business Analyst	Dashboard Creation	USN-3	As a business analyst, I can create interactive dashboards in Tableau.	Dashboard displays all required visualizations.	High	Sprint-1
Business Analyst	Consumer Analysis	USN-4	As a business analyst, I can analyse customer ordering behaviour.	Trends and patterns are visible in charts.	High	Sprint-1
Business Analyst	Trend Identification	USN-5	As a business analyst, I can identify popular cuisines and ordering preferences.	Dashboard highlights top trends.	High	Sprint-2
Stakeholder	Dashboard Access	USN-6	As a stakeholder, I can access the dashboard online.	Dashboard loads successfully through the Tableau Public link.	High	Sprint-1
Management	Decision Support	USN-7	As a manager, I can use dashboard insights for business decisions.	Reports provide actionable information.	High	Sprint-3
Management	Performance Monitoring	USN-8	As a manager, I can monitor ordering trends over time.	Trend analysis charts are available.	Medium	Sprint-3
Management	Report Sharing	USN-9	As a manager, I can share dashboard insights with team members.	Dashboard links can be accessed by authorized users	Low	Sprint-3

3.4 Technology Stack:

Technical Architecture:

The proposed **Food Ordering Behaviour and Consumer Trends** system is designed to analyze customer food ordering data and provide meaningful insights through interactive Tableau dashboards. The architecture consists of data collection, data preprocessing, data analysis, data visualization, and dashboard presentation. The processed food ordering data is transformed into interactive charts, dashboards, and stories that help users understand customer ordering behaviour, cuisine preferences, spending patterns, delivery performance, and consumer trends, enabling better decision-making and business insights.

Table-1: Components & Technologies:

S.No	Component	Description	Technology
1.	Data Source	Food ordering dataset in CSV format	CSV File
2.	Data Preprocessing	Data cleaning, handling missing values, and transformation	Tableau Prep / Tableau Desktop
3.	Data Analysis	Analyze customer ordering behaviour and identify consumer trends	Tableau Desktop
4.	Data Visualization	Create interactive charts and dashboards for food ordering analysis	Tableau
5.	Dashboard	Interactive dashboard showing customer behaviour, cuisine preferences, delivery performance, and spending patterns	Tableau Dashboard
6.	Story	Present consumer insights using Tableau Story	Tableau Story
7.	File Storage	Store datasets and Tableau workbook	Local File System
8.	Operating System	Platform used for development	Windows 10/11
9.	Development Tool	Develop dashboards and visualizations	Tableau Desktop
10.	Output	Interactive reports, dashboards, and consumer trend visualizations	Tableau Public / Tableau Desktop

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Visualization Tool	Interactive dashboard development for food ordering behaviour analysis.	Tableau Desktop
2.	Data Accuracy	Accurate data cleaning, preprocessing, and visualization of food ordering data.	Tableau
3.	Scalability	Supports additional food ordering data and future consumer trend analysis.	Tableau
4.	Availability	Dashboard can be accessed locally or published through Tableau Public.	Tableau Public
5.	Performance	Fast filtering, visualization, and interactive dashboard performance.	Tableau

4.PROJECT DESIGN

4.1 Problem Solution Fit:

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer’s problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? - Online food delivery customers - Restaurant owners - Food delivery platforms - Business analysts - Marketing teams - Students / Researchers	6. CUSTOMER CONSTRAINTS CC What constraints prevent customers from solving the problem? - Large amount of food ordering data - Lack of interactive visualization - Manual analysis consumes time - Difficulty identifying customer trends - Limited business insights	5. AVAILABLE SOLUTIONS AS What solutions are available? - Swiggy Analytics - Zomato Business Dashboard - Excel spreadsheets - Restaurant sales reports - Basic BI dashboards	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which job(s)-to-be-done (or problems) do you address? - Need to understand customer ordering behaviour - Need to identify popular cuisines and food choices - Need to analyze customer spending patterns - Need to identify peak ordering hours - Need to visualize food ordering trends for better business decisions	9. PROBLEM ROOT CAUSE RC What is the real reason this problem exists? - Customer behaviour changes frequently - Food ordering data is large and complex - Businesses lack interactive dashboards - Manual reports make trend identification difficult - Marketing decisions are often based on assumptions	7. BEHAVIOUR BE What do customers currently do? - Order food using delivery apps - Compare prices and restaurant ratings - Look for offers and discounts - Read customer reviews - Frequently reorder favourite dishes	
Focus on J&P, tap into BE, understand RC	3. TRIGGERS TR What triggers customers to act? - Discounts and promotional offers - Busy work schedules - Weekend and holiday cravings - Convenience of online food delivery - Personalized recommendations	10. YOUR SOLUTION SL - Interactive Tableau dashboard for food ordering analysis - Visualizations of customer ordering trends - Analysis of popular cuisines and peak ordering times - Filters for customer demographics and order details - Story dashboard explaining consumer behaviour - Easy-to-use interface for data-driven business decisions	8. CHANNELS OF BEHAVIOUR CH 8.1 ONLINE - Tableau Dashboard (Tableau Public) - Swiggy - Zomato - Restaurant mobile applications - Social media promotions 8.2 OFFLINE - Restaurant visits - Printed sales reports - Customer feedback forms - Meetings with business teams	Extract online & offline CH of BE
Identify strong TR & EM	4. EMOTIONS: BEFORE / AFTER EM Before - Confused about customer preferences - Difficulty understanding demand - Time-consuming data analysis - Uncertain marketing decisions After - Better understanding of customer behaviour - Confident business decisions - Improved customer satisfaction - Increased restaurant sales			

4.2 Proposed Solution:

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Online food delivery platforms generate large amounts of customer data, but businesses often struggle to understand customer ordering behavior, preferences, spending patterns, and delivery trends. This makes it difficult to improve customer satisfaction on and make data driven business decisions.
2	Idea / Solution Description	Develop an interactive Tableau Dashboard and Story that analyzes food ordering behavior using customer demographic data, ordering frequency, cuisine preferences, payment methods, delivery time, ratings, and spending patterns. The dashboard provides visual insights that help restaurants and food delivery platforms understand consumer trends and improve business strategies.
3	Novelty / Uniqueness	The solution combines multiple consumer behavior metrics into a single interactive dashboard with drill-down capabilities and storytelling features. It enables easy exploration of trends across different customer segments, helping stakeholders make informed decisions without requiring technical expertise.
4	Social Impact / Customer Satisfaction	The dashboard helps restaurants improve food quality and delivery services based on customer feedback and preferences. Customers benefit from better recommendations, faster service, and improved overall experience, while businesses can enhance customer retention and satisfaction.
5	Business Model (Revenue Model)	The dashboard can be offered as a Business Intelligence (BI) solution to restaurants, cloud kitchens, and food delivery companies through subscription-based licensing, consulting services, or customized analytics solutions for enterprise clients.
6	Scalability of the Solution	The solution can be scaled by integrating real-time food ordering data, AI-based demand forecasting, customer segmentation, recommendation systems, and deployment on cloud platforms for large-scale restaurant chains and food delivery companies.

4.3 Solution Architecture:

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture of the Food Ordering Behaviour and Consumer Trends System:

Figure 1: Architecture and data flow of the voice patient diary sample application

5. PROJECT PLANNING & SCHEDULING:

5.1 Project Planning:

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story No.	User Story / Task	Story Points	Priority
Sprint-1	Data Collection	USN-1	As a developer, I can collect the food ordering dataset from a reliable source for analysis.	2	High
Sprint-1	Data Cleaning	USN-2	As a developer, I can remove duplicates, handle missing values, and standardize the dataset.	3	High
Sprint-1	Data Preparation	USN-3	As a developer, I can create calculated fields and format data for Tableau.	2	High
Sprint-2	KPI Development	USN-4	As a user, I can view important KPIs like total orders, average spending, and customer count.	3	High
Sprint-2	Dashboard Design	USN-5	As a user, I can interact with charts, filters, and visualizations on the dashboard.	5	High
Sprint-2	Interactive Filters	USN-6	As a user, I can filter the dashboard by age group, occupation, cuisine, and payment method.	2	Medium
Sprint-3	Story Creation	USN-7	As a user, I can understand insights through an interactive Tableau Story.	3	Medium
Sprint-4	Documentation & Deployment	USN-8	As a developer, I can publish the dashboard and prepare project documentation.	3	Medium

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date (Actual)
Sprint-1	7	6 Days	01 July 2026	06 July 2026	7	06 July 2026
Sprint-2	10	6 Days	07 July 2026	12 July 2026	10	12 July 2026
Sprint-3	8	6 Days	13 July 2026	18 July 2026	8	18 July 2026
Sprint-4	5	6 Days	19 July 2026	24 July 2026	5	24 July 2026

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing:

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values
1.	Data Rendered	The food_ordering_behavior_dataset.csv was successfully imported into Tableau. All records and required fields were loaded correctly without data corruption.
2.	Data Preprocessing	Missing values were handled, duplicate records were removed, data types were verified, and the dataset was prepared for visualization in Tableau.
3.	Utilization of Filters	Interactive filters were used to analyze consumer behavior based on attributes such as Cuisine Type, Restaurant Rating, Price Range, Delivery Time, and Order Frequency, enabling dynamic exploration of the dataset.
4.	Calculation fields Used	Basic Tableau calculations and aggregations were used to summarize ordering data. Calculated measures supported the analysis of average order value, customer satisfaction ratings, and delivery performance.
5.	Dashboard design	09 unique visualizations were created to analyze different aspects of the food ordering dataset, including KPI demonstrations, geographical trends, order distribution, and customer preferences.
6	Story Design	1 cohesive Tableau Story was created to present the overall analysis by combining these 09 visualizations and explaining key insights related to consumer food ordering habits and market trends.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Interactive visualization of food ordering data.
- Easy analysis of customer ordering behavior and cuisine preferences.
- Better understanding of consumer trends and purchasing habits.
- Supports data-driven decision-making for restaurants and food delivery platforms.
- User-friendly Tableau dashboards and interactive reports.

Disadvantages

- Results depend on the quality and accuracy of the dataset.
- Limited to the available food ordering data.
- Requires Tableau software to edit and maintain dashboards.
- Dashboard performance may decrease with very large datasets.

9. CONCLUSION

The Food Ordering Behavior and Consumer Trends project uses Tableau to analyze food ordering data and present meaningful insights through interactive dashboards. It helps identify customer ordering behavior, cuisine preferences, and consumer trends, supporting better decision-making for restaurants and food delivery platforms.

10. FUTURE SCOPE

- Integrate real-time food ordering data from online delivery platforms.
- Apply machine learning techniques to predict customer ordering behavior.
- Develop personalized food recommendations based on customer preferences.
- Enhance dashboards with advanced analytics and AI-driven insights.
- Expand the analysis to include customer reviews, ratings, and seasonal trends.
