

Project Performance Test

Date	11 July 2026
Team ID	
Project Name	Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values
1.	Data Rendered	The food_ordering_behavior_dataset.csv was successfully imported into Tableau. All records and required fields were loaded correctly without data corruption.
2.	Data Preprocessing	Missing values were handled, duplicate records were removed, data types were verified, and the dataset was prepared for visualization in Tableau.
3.	Utilization of Filters	Interactive filters were used to analyze consumer behavior based on attributes such as Cuisine Type, Restaurant Rating, Price Range, Delivery Time, and Order Frequency, enabling dynamic exploration of the dataset.
4.	Calculation fields Used	Basic Tableau calculations and aggregations were used to summarize ordering data. Calculated measures supported the analysis of average order value, customer satisfaction ratings, and delivery performance.
5.	Dashboard design	09 unique visualizations were created to analyze different aspects of the food ordering dataset, including KPI demonstrations, geographical trends, order distribution, and customer preferences.
6	Story Design	1 cohesive Tableau Story was created to present the overall analysis by combining these 09 visualizations and explaining key insights related to consumer food ordering habits and market trends.
